

# Turnkey Solutions for Power Plant Operators

**NOXCO delivers a continuous performance guarantee for the entire emissions system through a fully integrated solution.**

## HERE'S HOW IT WORKS:

### 1 Individual Plant Assessment

The NOXCO team assesses your plant to understand your specific operating parameters, and considers local and regional emissions requirements, evaluates dispatch profiles and energy market opportunities, documents current system performance and expected remaining catalyst life.

### 2 Identify Systems Opportunities

Emissions system upgrades or modifications are identified to improve compliance performance over the plant dispatch profile, alternative catalyst options are assessed for increased performance and life, and a tailored maintenance, testing and performance optimization program is developed.

### 3 Set Emissions Performance Guarantees

NOXCO tailors emissions system performance guarantees for the specific business requirements of your plant, delivers a firm lifecycle cost, and provides annual maintenance, testing and adjustment as necessary to ensure long term results.

## Risk Transfer to NOXCO

Compliance, maintenance and performance risk is transferred from the operator to NOXCO, delivering peace of mind that the emissions systems is being expertly managed and performance guaranteed by your partners at NOXCO.
